SCHWIFTYTHING

SchwiftyEx – Get started

Set up in a few minutes from a phone, tablet or laptop. Everything is done in your web browser – no app to install.

Full manual
schwiftything.com/pages/schwiftyex-manual

1 Connect it

Connect SchwiftyEx to your computer with a USB-C cable. It shows up as a USB-MIDI device called **Schwifty**.

The ring around the setup button **blinks red**: it is new and has no password yet.

2 Join its Wi-Fi

On your phone, tablet or laptop, join the Wi-Fi network **Schwifty** (no password on a new unit).

The **Welcome** page opens by itself. If it does not, open your browser and type `http://schwifty.local` – including `http://`.

3 Choose a password & your Wi-Fi

Choose a password (8–63 characters). The same password protects the setup page **and** the Schwifty network.

Optional: pick your own Wi-Fi and enter its password. Then press **Save**.

4 Log in

With your Wi-Fi: your phone goes back to your Wi-Fi. Open `http://schwifty.local` and log in. The ring turns **blue**.

Without: join **Schwifty** again with your new password – the login page opens (or `http://schwifty.local`). The ring is **purple**.

5 · TRY THE BUTTONS – READY-MADE EXAMPLES

BUTTON	SENDS ON PRESS / RELEASE	WHERE
B1	MIDI Note 60 on / off (channel 1)	USB-MIDI
B2	OSC `/schwifty/b2 1` / `/schwifty/b2 0`	Wi-Fi, to every device on the network, UDP port 8000
B3	SysEx `F0 7D 53 58 01 F7` / `… 00 F7`	USB-MIDI
B4	MIDI CC 1 = 127 / 0 (channel 1)	USB-MIDI

Open a MIDI monitor (or an OSC monitor on port 8000) and press the buttons. Then make them your own under **Functions**, add remote controls under **Pairings**, and save console commands under **Presets**.

THE SETUP RING

Blinking red	No password yet – open to anyone
Purple	Its own network **Schwifty**
Blue	Connected to your Wi-Fi
Red + blue / purple	30-second password-free window is open

GOOD TO KNOW

- **Forgot the password?** Tap the setup button 5 times: you get 30 seconds to log in without it and set a new one.
- **Hold the setup button for 5 seconds** to switch between your Wi-Fi (blue) and its own network (purple).
- **Page won't load?** `http://schwifty.local` works on both networks – check that your device is on the same one as SchwiftyEx (blue ring: your Wi-Fi, purple: **Schwifty**).
- **Updates:** Settings → Firmware Update → **Check for updates** (needs internet).
- **Console commands** for grandMA3, Eos, QLab, X32 and more: schwiftything.com/pages/osc-midi-generators
